3.1	Error loading buckets feature	9

1 TPG Scheduler Changes

1.1 Wrong business process flow when creating a project

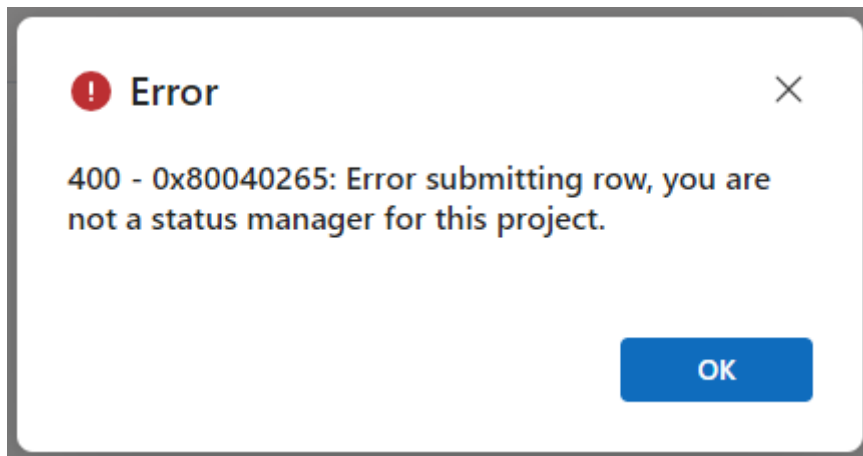

If a project is created from a project request and a specific Enterprise Project Type with a specific project life cycle is assigned to this request, the project is created, but it is not assigned the specific project life cycle of the business process. Instead, only the standard project life cycle is assigned.

The flow has now been adjusted so that the business process flow configured in the Enterprise Project Type is assigned to the project.

▶ The correct business process flow is now displayed.

1.2 Bug Fix: User can approve their own timesheet entries

A bug allowed users to self approve their timesheets. With this fix, any user who is not a status manager is now blocked from approving timesheet rows. This includes System Administrators, the following error will be shown:

1.3 Bug Fix: Missing translation for DE and FR restored

An error caused the standard fields in projects, tasks and assignments, e.g. Created on, Changed by, etc., to no longer be translated into German and French.

▶ This problem has now been fixed and all standard fields have been translated.

1.4 Bug Fix: Incorrect display in full screen mode

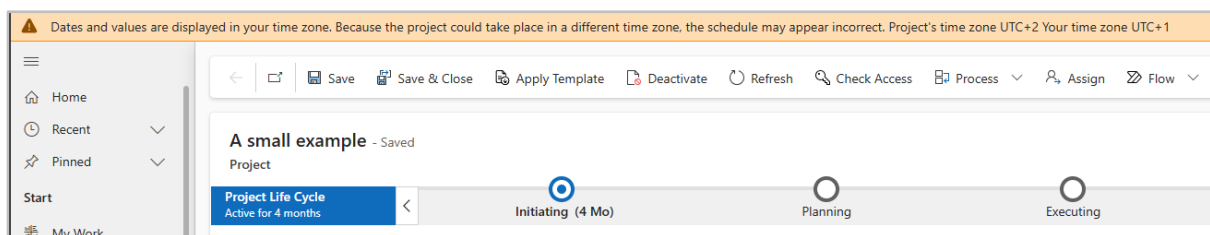

In this update several issues related to the full screen mode have been fixed:

- The menu for project tasks, which opens after a right-click, is now displayed in the correct position on the screen.
- Errors no longer occur if the full screen mode is closed before it is fully loaded.
- Switching between modes after opening the task editor no longer causes errors.

1.5 Bug Fix: Project Start date changes unpredictable

When the users time zone differs from the time zone of the project and this user opens the schedule it will be shown in the users time zone. This can lead to problems also when making changes to the plan.

▶ We now show a warning banner at the top of the project to inform the user about time zone differences.

1.6 Bug Fix: Project user cannot add a task (Timesheet)

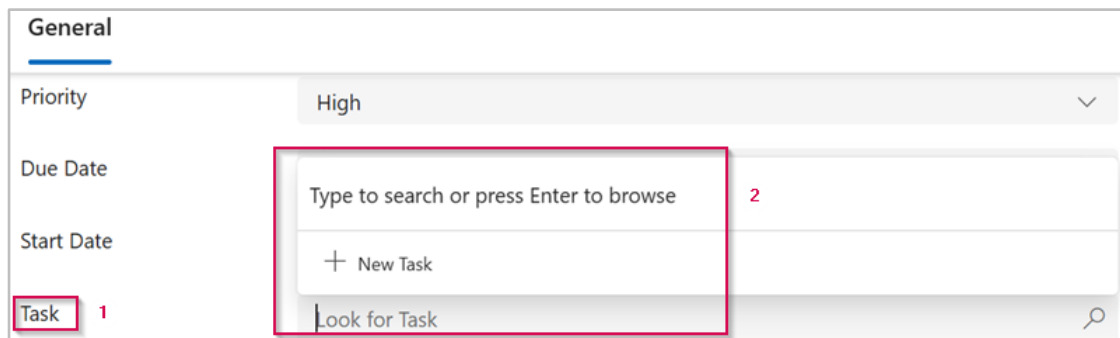

In a default installation with timesheets, a project user cannot add a task with Add tasks. This bug has been fixed.

▶ A project user can now assign themselves tasks in the timesheet.

1.7 Link Action items to a project task

Action items can now be linked to project tasks:

- Double-click on the *Action* item
- Go to *Task*.
- Click in the text field and select the task you want to add.

1.8 Bug Fix: Incorrect display of columns or data (Project Gantt)

With this update, some corrections have been made to ensure that the correct data and columns are displayed when switching between different Project Gantt views.

▶ Each Project Gantt instance now applies the appropriate filters, displays the correct columns and loads the data correctly.

2 Advanced Grid Changes

2.1 New buttons for expand and collapse all groups

This update contains 3 new buttons for expanding and collapsing all groups.

- *Expand all (1)*
- *Collapse all (2)*
- *Expand to (3)*

Expand all: This button expands all groups in the grid.

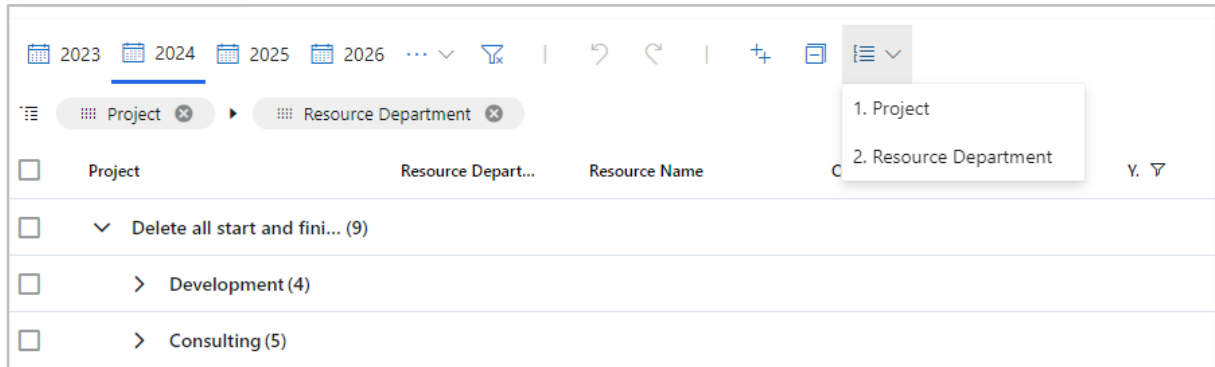

- Click *Expand all*
- ▶ all groups are expanded

Collapse all: This button collapses all groups in the grid.

- Click *Collapse all*
- ▶ all groups are collapsed

Expand to: This button displays a submenu with grouping levels.

- Click *Expand to*
- Click on a group level in the list
- ▶ the grid expands or collapses to show this level and all levels before it

▶ The buttons are all deactivated if no grouping is activated.

2.2 New Timesheet Configuration: Assignment mode

We are introducing a new configuration option allowing admins to select between *Assignments mode* and *Tasks mode*.

Assignments (new: default): shows the Assignment column and only allows users to select assignments they are personally assigned to.

Tasks (previous default): shows the Task column, allowing users to select a task from the selected project.

Both Task and Assignment columns display the task name, but the key difference is in the filtering of available options depending on the mode.

Upgrade Steps:

- Select the desired Timesheet mode in the settings
- *tpg_task* and *tpg_assignments* fields in the Column *Special Configuration* can be removed as it is no longer required - unless custom behaviour is needed.

2.3 Bug Fix: Error when adding a task with # in the user name

Wherever a user name is loaded it is now possible for users with special characters like "#" as well.

2.4 Bug Fix: Error when adding tasks in assignment mode before 2.6

In versions prior to v2.6 when the timesheets are manually configured for assignment mode it is now possible to add tasks again.

2.5 Bug Fix: Hyperlinks in grids with hierarchy enabled don't work

We fixed an issue which our hierarchy configuration, which when used broke all hyperlinks in the grid.

3 Kanban

3.1 Error loading buckets feature

Fixed issue when task bucket table had more than one relationship to the project table.
